Main Notes

Usage Guide and Interface Introduction

Below is an example of filling text into 2 side-by-side columns and 1 additional column underneath, namely: 1. 'keywords' column 2. "main notes" column 3. "summary" column

Use 'single quotes' or 'double quotes' on keywords in the notes column so they can be hidden or revealed using the content button. This is highly useful for active recall, especially for work involving a 'computer'. It can break down a wordy 'Paragraph' into a few essential words. From the creator's experience, note-taking is intentionally limited to '1 page' open at a time.

Use the shortcut key control + s to save 1 page.

You can directly prompt using 'Google Gemini' by pressing 'control + n' followed by the prompt, then press control + enter. Fill in your Google Gemini API token first in the AI menu. For other shortcuts, please read the 'documentation' in the 'Help' menu section.
